layer

**03** LoRaWAN  
link layer

**04** LoRaBlink  
an idea

# What is LoRa

# What is LoRa

Expected around 75 billion IoT devices  
By 2025

Need for LPWAN  
low-power wide-area network

Two types of technologies, Non-cellular-based technologies  
Sigfox and LoRaWAN®

Cellular-based technologies  
LTE-M and NB-IoT

4 of 23

70%

According to the report of Exploding Topics in 2024, around 70% of all devices around the globe are IoT devices, reaching a total of 30 billion, with an increase of 14% in 2022 and it will not stop any time soon.

# What is LoRa

## Smart Cities

- Street lighting
- Smart parking
- Waste management
- Water level and flood management

# What is LoRa

## Smart Buildings

- Temperature and Humidity Monitoring
- Room Occupancy
- Motion Detection
- Smart Water Metering
- Fire, flood, CO/CO2 level Monitoring

# What is LoRa

## Logistics and Transportation Management

- monitoring packages and vehicles
- NFS payments

# What is LoRa

## Smart Healthcare

- Hospital Patients
- Seniors Care Residents
- High Performing Athletes

# What is LoRa

## **Others**

- **Public Safety**
- **Space Utilization**
- **Smart Environment**
- **Smart Agriculture**

# LoRa Alliance

- Open
- Non-profit association

## LoRa

- Small packets
- Long ranges

## LPWAN Modules

- MKR FOX 1200, BN 1500, WAN 1310

# LoRa's physical layer

# LoRa PHY

## LoRa PHY

- Chirp Spread Spectrum (CSS)
- Frequency Shift Keying (FSK)

## Benefits

- Resilience, robustness
- Simple, low power consumption
- Long-range, linear frequency modulation

# LoRa PHY

Frequency Shift – Chirp Spread Spectrum (FS-CSS)

Signal form:

$$x(t) = e^{j\pi\mu t^2}$$

The complex function used by LoRa:

$$x(t) = e^{j(\pi\mu t^2 + 2\pi f t + \theta)}$$

Three changeable parameters:

- Phase  $\theta$
- Frequency  $\omega = 2\pi f$
- Chirp rate  $\mu$

# LoRa PHY

Use of frequency for modulation

$$f_m = mf_1 \quad , \quad f_1 = \frac{B}{M}$$

Protocol specifications:

- Carrier Frequency
- Bandwidth
- Symbol Rate
- Chirp Rate
- Chip Rate

# LoRa PHY

## Two types of packets

1. explicit

2. implicit

# LoRaWAN link layer

# LoRaWAN

Range from 3km to 15km

LoRaWAN architecture:

- Endpoint
- Gateway
- Network server
- Application server

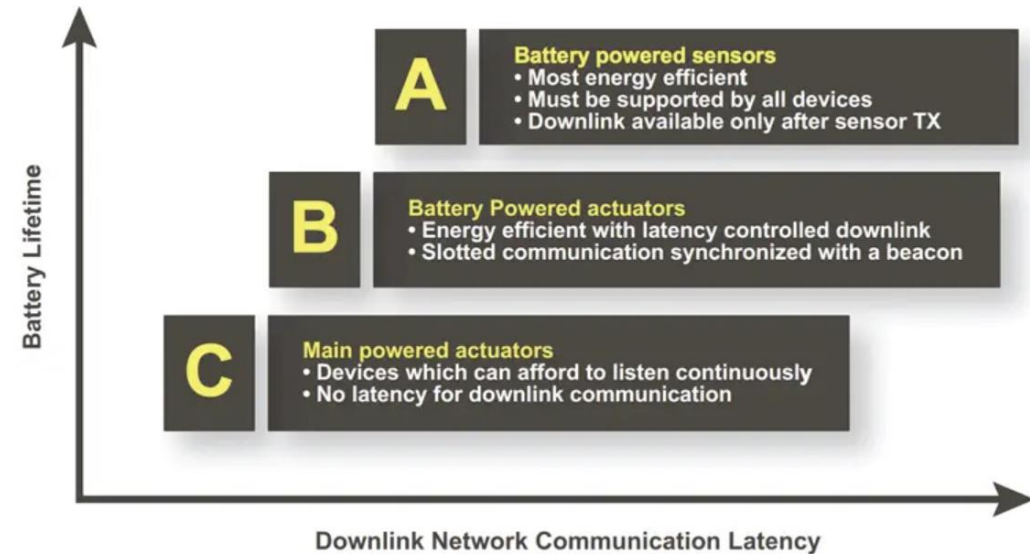

# LoRaWAN

## LoRaWAN device classes

- Class A
  - Lowest power
  - Short downlink receives windows
- Class B
  - Downlink windows in scheduled times
- Class C
  - Minimum delay
  - Always receiving

# MOKOSmart LoRaWAN sensors

# LoRaBlink

# LoRaBlink

## Goals:

- Multi-Hop
- Low-Energy
- Resilience
- Low-Latency

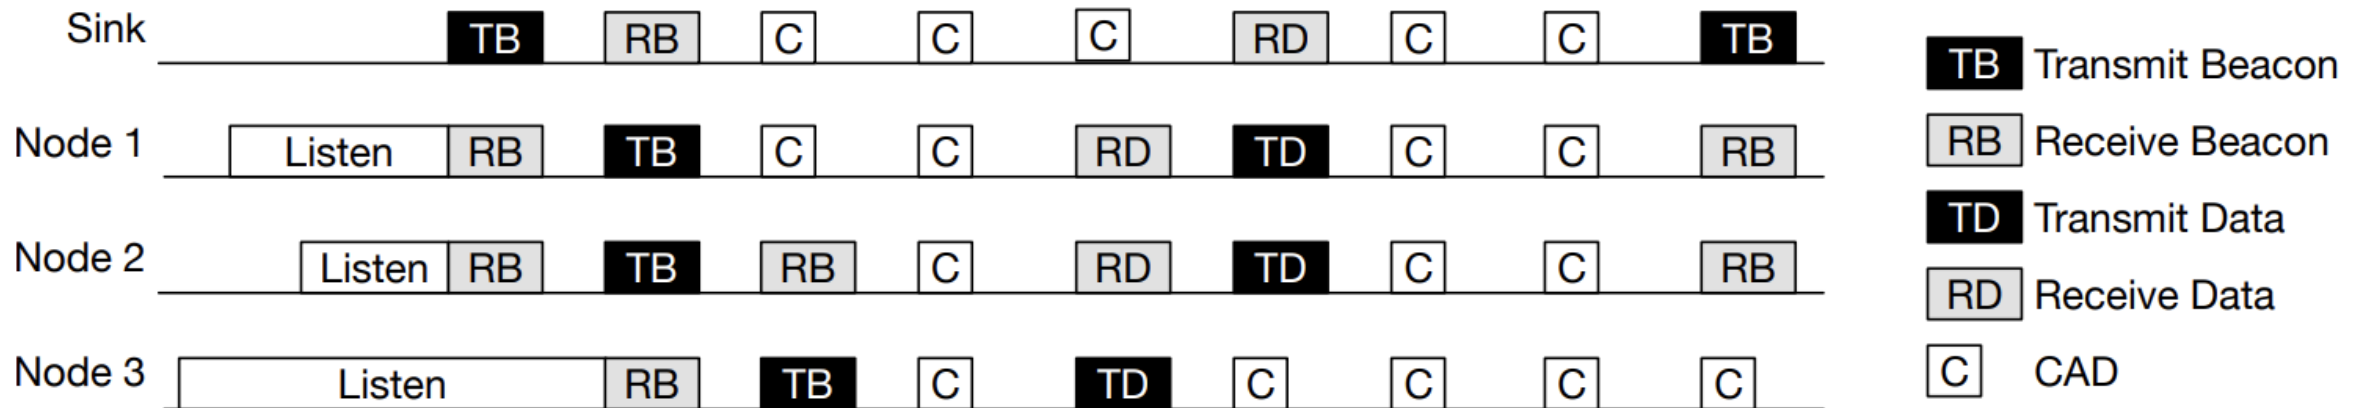

## Slotted channel access

## Optional Ack

## Possible relaying

# LoRaBlink

**Figure 4. LoRaBlink: Protocol example using a 4 node network.**

# LoRaBlink

Feature/Aspect	LoRaWAN	LoRaBlink
<b>Topology</b>	Star topology where all nodes communicate directly with the gateway.	Multi-hop communication supporting data relaying via nodes.
<b>Routing</b>	Gateway-based centralized communication; no routing between nodes.	Decentralized; integrates MAC and routing for multi-hop communication.
<b>Unique Features Used</b>	Uses LoRa's physical layer features like long range and low power, but focused on single-hop communication.	Exploits LoRa features like concurrent transmissions and carrier activity detection for robust multi-hop communication.
<b>Applications</b>	Meter reading, environmental monitoring, and city-wide IoT solutions.	IoT deployments in challenging environments requiring multi-hop communication, such as rural or large campus networks.

A stylized globe on the left side of the slide, showing continents in green and oceans in blue. Overlaid on the globe is a network of white dots connected by thin white lines, representing a global communication network. The background of the slide is a dark purple space with a nebula and stars.

# Conclusion

Need of communication  
Low Power Wide Area Networks  
LoRa Alliance

LoRa PHY  
Use of FSK and CSS  
Physical layer packets

# Conclusion

LoRaWAN  
Different classes  
LoRaWAN gadgets

LoRaBlink  
Add multihop  
Sinks and Beacons
